

QA Feedback for Admin Side

1.

It may be helpful to assign a specific room number, such as Daniels 202, because not everyone may know where the checkout room is located.

In the Add Equipment tab, Brand, Model, and Quality/Condition should be required fields.

The screenshot shows a web application interface for adding equipment. At the top, there is a breadcrumb trail 'Items > New item' and a close button 'x'. The main heading is 'Add Equipment' with a subtitle 'Create a new asset in your global inventory.' The form is divided into several sections: 'Item details' with instructions to provide a clear name, category, and storage location; 'Item Image' with a dashed box and an upload icon; 'Brand' and 'Model' text input fields with placeholder text 'e.g. Sony' and 'e.g. Alpha 7 IV'; 'Name' with a red asterisk and placeholder 'e.g. Main Studio Camera'; 'Category' with a red asterisk and a dropdown menu showing 'Select category'; 'Location' with a red asterisk and a text field containing 'DM Checkout (second floor of Daniels Hall)'; 'Quantity' with a text field containing '1'; a link 'Add more item info' with a red asterisk; and 'Tracking Method' with a radio button selected for 'As individual items'. At the bottom right, there are 'Cancel' and 'Add item' buttons.

2.

I added the equipment item Nikon Z6.

After that, I tried to edit its availability in the inventory, but the changes did not save or update properly. The total quantity and available count did not change, so there may be an issue with how the inventory updates are being saved.

The Edit Equipment page may not be properly linked to the database for inventory updates. Also, changing the equipment status does not seem to work. For example, when I try to update the image or the status, the change does not save or reflect in the system.

The screenshot shows a web browser window with the URL `eu-equipment-management.vercel.app/admin/inventory`. A modal form titled "Edit Equipment" is open, with the subtitle "Update the equipment information". The form contains the following fields and controls:

- Equipment Image:** A small camera icon with a red 'x' next to it, followed by a dashed box placeholder. Above the placeholder is a "Change Image" button with an upload icon and the text "PNG, JPG, WEBP up to 10MB".
- Equipment Name:** A text input field containing "Nikon Z 6".
- Category:** A dropdown menu showing "Cameras".
- Brand:** A text input field containing "Nikon".
- Model:** A text input field containing "Z6".
- Description:** A large text area.
- Total Quantity:** A text input field containing "1".
- Available Count:** A text input field containing "1".
- Condition:** A dropdown menu showing "Good".
- Status:** A dropdown menu showing "Available".

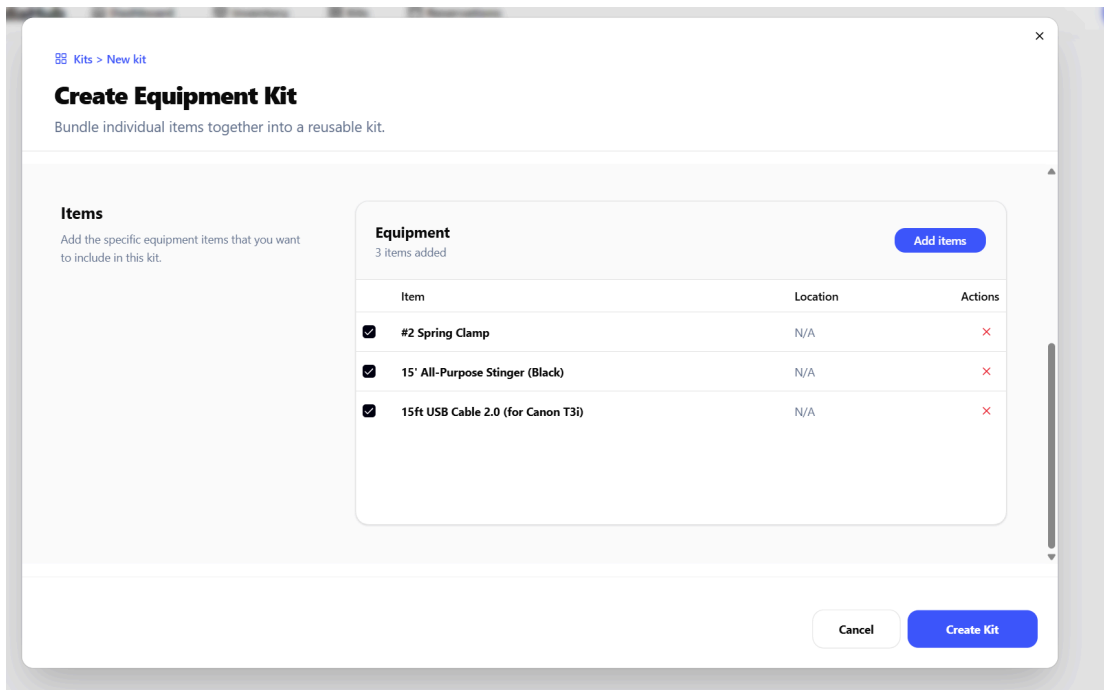

At the bottom of the form, there are three buttons: "Delete Equipment" (in red), "Cancel", and "Save Changes" (in blue).

3.

When creating a kit, the Location column may not be necessary if it only displays N/A for every item. Since it does not provide useful information, it could either be removed or replaced with a more helpful field.

I also noticed that when creating a new kit, I am not able to manually choose the kit status. The system automatically marks it as Available or Incomplete. It would be helpful to allow users to choose or update the status manually for better control.

The system should not allow an equipment kit to be created unless it contains at least two or more items. Since this is a kit, it should include multiple items rather than just one item. Right now, the system allows a kit to be created with zero items, which should not be allowed.

The screenshot shows a web interface for creating a new equipment kit. The title is "Create Equipment Kit" with a subtitle "Bundle individual items together into a reusable kit." Below this, there is an "Items" section with the instruction "Add the specific equipment items that you want to include in this kit." To the right of this instruction is a table titled "Equipment" with the note "3 items added" and an "Add items" button. The table has three columns: "Item", "Location", and "Actions". It contains three rows of items, each with a checkbox in the "Item" column, the item name, "N/A" in the "Location" column, and a red "X" in the "Actions" column. At the bottom of the form are "Cancel" and "Create Kit" buttons.

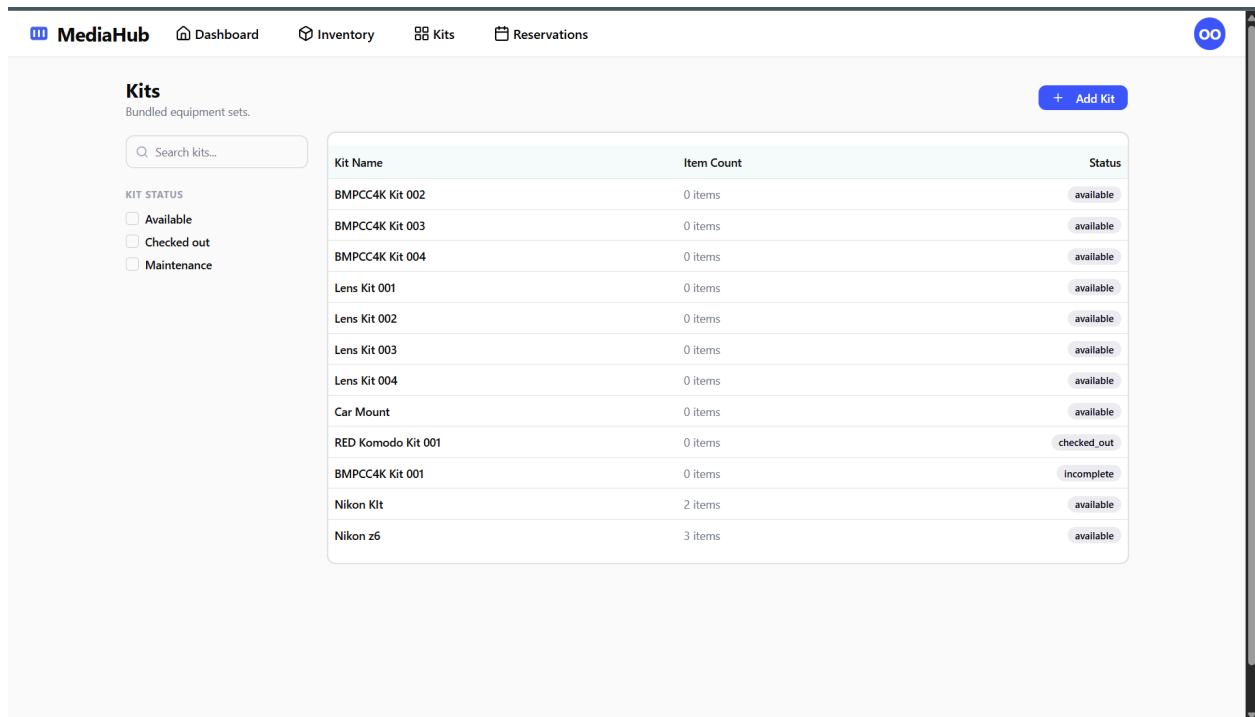

Item	Location	Actions
☒ #2 Spring Clamp	N/A	×
☒ 15' All-Purpose Stinger (Black)	N/A	×
☒ 15ft USB Cable 2.0 (for Canon T3i)	N/A	×

4.

On the Kits page, the filters do not seem to work properly. When I click “Available”, it does not show the available kits.

There also does not seem to be a way to update the status of a kit, name, or edit the items included in the kit. It would be helpful to have an Edit button or another action option in case there is a mistake or an item needs to be removed from a kit.

I also noticed that kits created and managed on the admin side are not showing up on the user/student side. In addition, kits listed on the user/student side do not appear in the admin kit list.

The screenshot shows the MediaHub interface with the 'Kits' page selected. The page title is 'Kits' with a subtitle 'Bundled equipment sets.' and an '+ Add Kit' button. A search bar is present with the placeholder 'Search kits...'. On the left, under 'KIT STATUS', there are three radio buttons: 'Available' (selected), 'Checked out', and 'Maintenance'. The main table displays the following data:

Kit Name	Item Count	Status
BMPCC4K Kit 002	0 items	available
BMPCC4K Kit 003	0 items	available
BMPCC4K Kit 004	0 items	available
Lens Kit 001	0 items	available
Lens Kit 002	0 items	available
Lens Kit 003	0 items	available
Lens Kit 004	0 items	available
Car Mount	0 items	available
RED Komodo Kit 001	0 items	checked_out
BMPCC4K Kit 001	0 items	incomplete
Nikon Kit	2 items	available
Nikon z6	3 items	available

5.

On the Admin Reservations page, it would be helpful to clarify which date the filter is using.

Since there are two dates shown under the “Dates” column, the filter label could be changed to something more specific, such as “Date Checked Out”. This would make it easier for admins to understand which date is being filtered.

6.

From the admin side, I noticed that the system allows students to book items without showing an ID number.

This should not be allowed because the student ID is needed to properly identify who made the booking.

I will confirm this properly when I test from the student/user side.

I also noticed that admins are unable to click on a booking to view more details. It would be helpful to have a “View Details” option where admins can see more information about the booking, such as the student’s full name, ID number, booking details, and more information about the item or kit that was checked out.

Instead of only showing the item name, the booking details could include the item type, brand, model, quality/condition, and other information entered when creating the equipment in the inventory.
